

AirPro™

BASEBALL BUMP CAP

The MPS Centurion AirPro™ Baseball Bump Cap is designed for Comfort, Protection, and Hygiene.

All of the AirPro components are designed for maximum breathability, for maximum coolness. And, at under 5 ounces, it's extremely lightweight.

An ABS insert works together with an integrated pad, offering protection from bumps and scrapes. Side pads provide excellent shock-absorption. And, reflective materials in the back and on the brim help ensure that workers can be seen.

AirPro's shell and pad can be removed and rinsed under tap water, while the cloth cover can be machine washed.

AIRPRO BASEBALL BUMP CAP

MPS Centurion Baseball Bump Caps provide lightweight head protection, while doubling as a fashionable, comfortable piece of work wear. The look and feel of the cap make it more appealing for employees than conventional, plastic bump caps.

The design, available in eight colors, incorporates an ABS protective shell and pad, inside a highly breathable polyester baseball cap. We also offer a cap in Flame-Resistant *Proban*.

For added comfort, mesh ventilation “stripes” on each side provide maximum airflow. An adjustable, metal-free elastic strap means that one size fits most. The design and shape of the cap, with extended back ensure that the AirPro fits very securely and remains comfortable over long periods of wear.

IMPORTANT NOTE: Baseball Bump Caps are for use in environments where there is a risk of bumps or scrapes to the head. It is *not* to be used as an industrial safety helmet or hard hat.
